

光と太陽の魔法 ダイアモンドダストカヌー。

ダイアモンドダストを観たことがある人は?と聞かれて手を上げることができる人はとても少ないはず。ましてやダイアモンドダストカヌーは?と言えば絶句。空気中の水分が凍ってしまったものがダイアモンドダスト。朝陽に照らされると目の前全体がキラキラと輝く。そのなかをカヌーで川を下ってゆく。まわりの雑木林は霧氷の世界。川面も加え足元からはじまり目の前全てが煌めいている…そんな世界がダイアモンドダストカヌー。

Diamond dust canoeing, a magic by the sun and light. A very few people will put their hand up when they are asked whether they have seen diamond dust, and almost no one canoed through diamond dust. Diamond dust is a phenomenon that occurs when the moisture in the air freezes. The entire view in front of you sparkles when the morning light hits them, and you will canoe down the river through those sparkles. The surrounding copse is the rice ice world. Everything in front of you is glittering including the surface of the river. This is the world of diamond dust canoeing.
